Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned architecture, implementation priorities, release standards, and production support for education platforms, turning operator requirements into maintainable features and accountable delivery.
- Led distributed contributors through written technical plans, GitHub code reviews, automated tests, and release checks so changes were understood and production defects were caught early.
- Designed data models, validation rules, access controls, system boundaries, and technical documentation so staff could operate dependable systems without relying on undocumented knowledge.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Modernized a public-facing web application by migrating React to SvelteKit while integrating Python, Django REST APIs, PostgreSQL, and GCP so the live product could evolve without interrupting customers.
- Developed Python and Django services for publishing, live video, search, CMS, and AI-writing workflows, using PostgreSQL models and API validation to support customer-facing features.
- Expanded automated testing with integration, regression, real-database concurrency, and failure-path tests so API, webhook, and asynchronous changes were safe under retries and duplicate delivery.
- Managed Dockerized services, GCP CI/CD, production logs, health checks, deployment gates, and automatic rollback, collaborating across product and DevOps concerns during each release cycle.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer using Next.js, React, TypeScript, Node.js, REST APIs, PostgreSQL, and role-based access, owning the web application from architecture through production release.
- Ran demos and a live pilot with advisors and employers, then used browser traces, application logs, diagnostic SQL, and data checks to fix bugs and improve onboarding, reporting, and reliability.
- Documented architecture, data models, deployment steps, and support procedures so distributed stakeholders could review decisions and continue operating the platform.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with Next.js, TypeScript, React, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Designed relational schemas, migrations, permissions, validations, reports, and Python data scripts so program teams could operate from consistent records instead of manual reconciliation.
- Diagnosed production issues with logs, SQL, regression checks, data-cleanup workflows, and user walkthroughs, then documented fixes so recurring bugs were easier to resolve.

Open Source and Linux Projects

Open-Source Contributor: Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed prompt-preservation, board-scoped default, Windows agent-setup, stale SSH-session, and editor fixes through public issues, regression tests, GitHub code review, and maintainer feedback.
- Worked inside established open-source codebases, reproduced bugs across operating-system and session boundaries, and revised patches when tests or review exposed a weaker design.

Brio - Cross-Platform Agent Control Plane

Go, React Native, PostgreSQL

- Built companion and relay services with background installation on Linux, macOS, and Windows, plus device pairing, session ownership, action logs, and health checks so agents could be operated across machines.

RegistroCiberVE Research and Verification Pipeline

Python, Playwright, LLM APIs

- Built a Python pipeline that retrieved web and PDF sources, rendered blocked pages, validated structured records, and handled retries, timeouts, caching, and fallbacks so public incident data remained reviewable and reproducible.

Volunteer Leadership

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Led strategy, partnerships, operations, and onboarding for a distributed national youth entrepreneurship network.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
