Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned data architecture for internal education platforms, translating stakeholder workflows into relational data models, validation rules, and reports so staff could rely on consistent information.
- Owned data delivery across the software development lifecycle (SDLC), using Git and GitHub to coordinate database changes and production releases while managing multiple deadlines and explaining data plans and risks to non-technical leaders.
- Used Zrode, Claude Code, Codex, and Cursor to accelerate requirements analysis, scripts, testing, debugging, and documentation, then reviewed generated work for correctness, security, maintainability, and production readiness.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Built and operated production ETL and event-driven data pipelines with Python, SQL, PostgreSQL, and Google Cloud Storage (GCS) to move meeting, recording, webhook, and account data across a live customer platform.
- Made Pub/Sub and webhook pipelines reliable with idempotency, durable event receipts, retries, and failure handling so duplicate delivery and transient failures did not corrupt business data.
- Protected data consistency with atomic database writes, audit records, concurrency tests, and failure-path testing so asynchronous processing stayed reliable during retries and outages.
- Improved pipeline and database reliability through a concurrent PostgreSQL index migration, GCP CI/CD, production logs, and automated rollback so releases remained observable and recoverable.

Product Engineer at U.S. Department of State via AVAA

November 2024 to August 2025

- Built and operated Billigua Talent as the sole engineer, using PostgreSQL, SQL, Prisma, REST APIs, and Node.js to replace disconnected spreadsheets with a shared source of operational data.
- Designed the relational schema, migrations, validation rules, role-based access, dashboards, and reporting flows so candidates, advisors, employers, and administrators could use consistent data in one platform.
- Gathered requirements from program and business users, mapped their reporting needs, piloted the system, and converted feedback into data-quality improvements, documented decisions, and production releases.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

Software Developer Intern at AVAA, Caracas

September 2021 to August 2022

- Built Python ETL pipelines to recover, clean, normalize, validate, and aggregate historical records, then delivered an interactive Power BI dashboard so program teams could use dependable data for recurring analytics and reporting.
- Designed, deployed, and maintained SEP and SEA with PostgreSQL, SQL, Prisma, and Azure, replacing spreadsheet-based operations with shared data systems for approximately 300 scholars, advisors, and staff.
- Modeled attendance, services, payments, receipts, outreach, and reporting data so education teams could work from consistent records instead of reconciling disconnected files and manual queries.
- Owned data reliability through diagnostic SQL, Python validation scripts, data cleanup, user walkthroughs, and release documentation, turning recurring issues into clearer workflows and maintainable operating processes.

Selected AI and Data Tooling

Zrode - Open-Source Agent Development Environment

TypeScript, Node.js, WebSockets

- Built and used an open-source development environment for Codex, Claude Code, Cursor, and OpenCode so AI agents could accelerate data analysis, scripting, testing, debugging, and technical documentation in one workflow.
- Designed typed events, session orchestration, checkpoints, runtime logs, health checks, and automated tests, then manually reviewed generated queries, scripts, and documentation so agent-assisted work remained correct, observable, and recoverable.

Open Source and Volunteer Leadership

Open-Source Contributor: Zed, Orca, and Hermes Agent

July 2026 to Current

- Contributed fixes for editor behavior, Windows agent setup, stale SSH sessions, prompt preservation, and board-scoped defaults through public issues, regression tests, and maintainer review.

Education Committee Member at AVAA

September 2024 to Current

- Maintained the participant platform and translated recurring reporting and data-quality problems from program leaders into validation rules, priorities, and system improvements.

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Set strategy with the board and led partnerships, operations, onboarding, and community programs for a national youth entrepreneurship and technology network.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
