Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned discovery, solution design, implementation, deployment, and production support for education platforms, working directly with operators to turn unclear workflow problems into concrete releases.
- Defined data models, integrations, access controls, validation rules, and human-review boundaries so staff could automate operational work without losing control of sensitive actions.
- Led distributed contributors through written plans, GitHub code reviews, automated tests, and release checks, while explaining technical tradeoffs and delivery risks to non-technical stakeholders.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Shipped an AI writing assistant to real users with Python, Django, prompt engineering, and live product activity as context, then corrected prompt and context failures from observed usage.
- Protected payment and balance-changing workflows with verified webhooks, idempotency, atomic PostgreSQL updates, durable event records, retries, and audit trails so duplicate or partial events could not corrupt user state.
- Built and operated customer-facing services across TypeScript, Python, Django REST APIs, PostgreSQL, Docker, and GCP, owning changes from architecture through production support.
- Instrumented CI/CD, application logs, health checks, deployment gates, and automatic rollback so live failures were visible, diagnosable, and recoverable while customers used the platform.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented client workflow, using TypeScript, Node.js, REST APIs, PostgreSQL, and role-based access to deliver the product from discovery through production support.
- Worked directly with advisors and employers through demos and a live pilot, finding where the real workflow differed from the initial request and turning feedback into onboarding, validation, and reporting changes.
- Diagnosed live issues with browser traces, application logs, SQL, and regression checks, then explained options and tradeoffs to non-technical stakeholders without waiting for a formal specification.

Work History (continued)

Software Developer at AVAA, Remote

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with TypeScript, Node.js, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Modeled participant records, services, payments, receipts, permissions, and reporting so program teams could complete daily operational work from consistent data instead of manual reconciliation.
- Investigated production and data failures with logs, SQL, Python validation scripts, cleanup workflows, and user walkthroughs, then documented fixes so recurring problems were easier to support.

Selected AI Agent and Automation Systems

RegistroCiberVE Research and Incident Verification Agent

Python, Playwright, LLM APIs

- Built a Python agent that ingested incident records, searched and interacted with websites, extracted web and PDF evidence, and produced structured verification reports for a public cybersecurity registry.
- Added source scoring, rejection reasons, human-review checkpoints, timeouts, retries, caches, browser fallbacks, and model escalation so unreliable pages and weak evidence did not become accepted records.

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js

- Built an open-source environment for multiple coding-agent providers with persistent sessions, typed events, runtime logs, health checks, and tests so agent workflows could be inspected and improved from real failures.

Brio - Mobile Agent Control Plane

Go, React Native, PostgreSQL

- Built companion and relay services with device pairing, per-user ownership, session state, routing, action logs, and health checks so a persistent agent could be operated, monitored, and recovered across devices.

Open Source

Contributor to Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed agent-setup, prompt-preservation, session, and editor fixes through public issues, regression tests, GitHub code review, and maintainer feedback.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
