Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned discovery, architecture, delivery, deployment, and production support for education platforms, working directly with operators to turn unclear workflow requests into concrete plans and decide which actions required human review.
- Designed data models, validation rules, access controls, system boundaries, and support processes so staff could automate repetitive work without losing control of consequential actions.
- Used AI coding agents to prototype and test production changes, while personally reviewing code, failure paths, and release readiness.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Shipped an AI writing assistant to real users with Python, Django, prompt engineering, and live platform activity as context, then corrected prompt and context failures so creators received useful drafts inside their publishing workflow.
- Led a production migration across TypeScript, JavaScript, Python, Django REST APIs, PostgreSQL, Docker, and GCP so a live startup product could evolve without interrupting customer workflows.
- Hardened Pub/Sub and webhook integrations with signature verification, idempotency, durable event records, retries, concurrency tests, and explicit failure handling so duplicate events and partial outages did not corrupt user state.
- Owned CI/CD, production logs, health checks, deployment gates, and automated rollback so failures were visible, diagnosable, and recoverable while customers used the platform.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented client workflow, using Next.js, React, TypeScript, Node.js, REST APIs, PostgreSQL, and role-based access to deliver the product from scope through production support.
- Ran demos and a live pilot with advisors and employers, asked users where the workflow failed, and translated their feedback into onboarding, service-management, data-validation, and reporting changes.
- Used browser traces, application logs, diagnostic SQL, and data checks to reproduce live issues, explain tradeoffs to non-technical stakeholders, and keep delivery moving without a formal specification.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with Next.js, TypeScript, React, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Modeled records, attendance, services, payments, receipts, permissions, and reporting so program teams could complete daily work from consistent data instead of manual reconciliation.
- Diagnosed production and data failures with logs, SQL, Python validation scripts, cleanup workflows, and user walkthroughs, then documented fixes so recurring problems were easier to resolve.

Selected AI Agent and Developer Tooling

RegistroCiberVE Research and Incident Verification Agent

Python, Playwright, LLM APIs

- Built a Python agent using OpenAI and Anthropic APIs, RAG-style retrieval, structured outputs, and Playwright to verify web and PDF evidence and create records for a public cybersecurity registry.
- Added evaluation criteria, source scoring, rejection reasons, human-review checkpoints, retries, caching, fallbacks, and model escalation to stop weak evidence and control failures, latency, and API cost.

Brio - Mobile Agent Control Plane

React Native, Go, PostgreSQL

- Built a control plane with device pairing, per-user ownership, session state, relay routing, action logs, and health checks so a persistent AI agent could be operated, monitored, and recovered across devices.

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js

- Built an open-source environment for multi-provider coding agents with session control, runtime logs, and health checks so agent workflows could be inspected and improved from real failures.

Open Source and Volunteer Leadership

Open-Source Contributor: Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed prompt-preservation fixes to Hermes Agent and Windows agent setup, stale SSH-session, and editor fixes to Orca and Zed through tests and maintainer review.

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Led strategy, partnerships, operations, and onboarding for a national youth entrepreneurship network.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
