

Kevin Bravo

Founding Software Engineer | Backend, DeFi and Risk Systems

0bravokevin@gmail.com | kevinbravo.com | github.com/0bkevin | linkedin.com/in/0bkevin | Remote

Professional Summary

Full-stack software engineer with 5 years of experience designing, shipping, and operating production systems in high-ownership environments. Strong in TypeScript, JavaScript, Node.js web tooling, Python, Django, PostgreSQL, REST APIs, asynchronous workflows, data modeling, deployments, and production reliability. Hands-on DeFi and Web3 study through Ethernaut, Damn Vulnerable DeFi, Brownie, EVM concepts, Solidity fundamentals, AMMs, lending pools, flash loans, wallet behavior, and smart-contract security. Comfortable moving from ambiguous product ideas to working systems, with a focus on correctness, failure handling, and fast iteration.

Technical Fit

Backend and infrastructure: TypeScript, JavaScript, Node.js web tooling, Python, Django, REST APIs, PostgreSQL, SQL, relational data modeling, asynchronous jobs, webhooks, idempotency, retries, concurrency tests, Docker, GCP, Cloud Build, GKE, Cloud SQL, GCS, Pub/Sub, logs, health checks, rollback, and deployment ownership.

DeFi and protocol systems: DeFi concepts, prediction-market interest, lending pools, leverage and margin concepts, AMMs, flash loans, EVM, Solidity fundamentals, Brownie, Web3.py, wallet behavior, oracle and collateral concepts, smart-contract security, and secure contract-interaction patterns.

Financial correctness and risk: Atomic transactions, durable event receipts, balance and audit effects, publish-after-commit workflows, duplicate handling, webhook verification, processing leases, deterministic validation, data-quality checks, reconciliation thinking, and risk-signal analysis.

Product engineering: React, SvelteKit, Next.js, responsive interfaces, dashboards, role-based workflows, server-side rendering, API integrations, testing, technical documentation, and end-to-end product ownership.

Professional Experience

Proyecto Educa

Chief Technology Officer

Remote
Dec 2025 - Present

- **Own product and technical direction** for education platforms, translating ambiguous requirements into architecture, implementation priorities, testing expectations, release decisions, and production support.
- **Lead hands-on execution across backend, frontend, automation, deployment, and reliability**, making pragmatic tradeoffs while keeping systems maintainable and useful.

Free2Z

Principal Software Engineer

Remote
Apr 2025 - Apr 2026

- **Led a live migration from React to SvelteKit** within a production GCP platform using Dockerized Django and SvelteKit services on GKE, Cloud SQL, GCS, Pub/Sub, Artifact Registry, Cloud Build, and Workload Identity.
- **Hardened a Pub/Sub consumer that changes user balances**, combining durable idempotency, atomic balance and audit effects, publish-after-commit logic, and explicit ACK/NACK behavior for duplicates and transient failures.
- **Made paid-meeting webhooks and recording ingestion idempotent** across Django, PostgreSQL, Pub/Sub, and GCS with verified signatures, durable business-event receipts, processing leases, and atomic ledger effects.
- **Strengthened production rollout and recovery** with worker health gates, automatic rollback, retry-safe concurrent PostgreSQL migrations, and real-database concurrency and failure-path tests.

U.S. Department of State (via AVAA)

Product Engineer | Bilingua Talent

Remote
Nov 2024 - Aug 2025

- **Built a multi-tenant platform as the sole engineer**, owning stakeholder discovery, relational data architecture, role-based access, APIs, dashboards, reporting, deployment, and production support.
- **Piloted the system with 50 users and 5 companies**, turning operational feedback into clearer onboarding, service-management workflows, data-quality checks, and reporting.

Asociacion Venezolano Americana de Amistad (AVAA)

Software Developer

Remote
Oct 2022 - Jul 2024

- **Built, deployed, and maintained SEP and SEA**, multi-tenant operational platforms using Next.js, TypeScript, PostgreSQL, Prisma, Auth.js, Azure, and Python workflows.
- **Replaced spreadsheet-heavy operations with maintainable systems** for records, attendance, volunteer hours, services, payments, receipts, outreach, data validation, and reporting.

DeFi, Protocol and Community Work

Web3 and DeFi technical writing: Published walkthroughs and research notes on Ethernaut, Damn Vulnerable DeFi, Brownie, wallet behavior, flash loans, lending pools, EVM concepts, and smart-contract security.

Secure protocol study: Worked through vulnerable-contract exercises involving access control, oracle assumptions, price manipulation, reentrancy, accounting errors, and unsafe external interactions.

Dev3pack: Organized the Caracas hub for a global Web3 and AI hackathon, coordinating logistics, mentors, sponsors, speakers, and participant support.

Zrode and Brio: Built applied AI and agent tooling for multi-provider coding workflows, session control, relay routing, logs, and operational visibility.

Education and Languages

Instituto de Estudios Superiores de Administracion (IESA)

Master of Public Administration, in progress

Remote
2025 - 2027

Languages: Spanish (Native), English (C1 - Professional Working Proficiency).
