Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned technical discovery, solution design, implementation, deployment, and production support for education platforms, turning open-ended operator problems into clear plans and measurable releases.
- Defined API boundaries, data models, integrations, access controls, validation rules, and human-review steps so staff could automate operational work without weakening security or user control.
- Led distributed contributors through written plans, architecture notes, GitHub code reviews, automated tests, and release checks, keeping technical decisions clear in an asynchronous environment.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Shipped an AI writing assistant to real users with Python, Django, prompt design, and retrieved product activity as context, then corrected prompt and context failures from observed usage.
- Protected payment and balance-changing workflows with verified webhooks, idempotency, atomic PostgreSQL updates, durable event records, retries, and audit trails so duplicate or partial events could not corrupt user state.
- Built and operated customer-facing services across TypeScript, Python, Django REST APIs, PostgreSQL, Docker, and GCP, owning changes from architecture through incident response and continuous improvement.
- Used GCP Workload Identity, CI/CD, production logs, health checks, deployment gates, and automatic rollback so service access and live failures remained controlled, observable, and recoverable.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented customer workflow, using TypeScript, Node.js, REST APIs, PostgreSQL, multi-tenant data models, and RBAC to deliver the product from discovery through production support.
- Ran technical discovery, demos, and a live pilot with advisors and employers, translating constraints and success criteria into data flows, validation rules, rollout steps, and product changes.
- Diagnosed live issues with browser traces, application logs, SQL, and regression checks, then documented decisions and explained tradeoffs to technical and non-technical stakeholders.

Work History (continued)

Software Developer at AVAA, Remote

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with TypeScript, Node.js, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Modeled participant records, services, payments, receipts, permissions, and reports with role-based access and scoped data flows so program teams could work from consistent information.
- Investigated production and data failures with logs, SQL, Python validation scripts, cleanup workflows, and user walkthroughs, then documented repeatable support and recovery steps.

Selected AI Agent and Automation Systems

RegistroCiberVE Research and Incident Verification Agent

Python, Playwright, LLM APIs

- Built a Python agent using retrieval, structured outputs, web-search and browser tools, and Playwright to verify web and PDF evidence and produce records for a public cybersecurity registry.
- Defined evaluation criteria, source scoring, rejection reasons, uncertainty labels, and human-review checkpoints, then added retries, caches, fallbacks, and model escalation to control quality, latency, and API cost.

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js

- Built an open-source environment for multiple coding-agent providers with persistent sessions, typed events, runtime logs, health checks, and tests so agent workflows could be observed, reproduced, and improved from real failures.

Brio - Mobile Agent Control Plane

Go, React Native, PostgreSQL

- Built companion and relay services with device pairing, per-user ownership, session state, routing, action logs, and health checks so a persistent agent could be operated, monitored, and recovered across devices.

Open Source

Contributor to Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed agent-setup, prompt-preservation, session, and editor fixes through public issues, regression tests, GitHub code review, and maintainer feedback.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
