Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned product and technical direction for education platforms, working with operators to find painful workflows, build the first useful version, observe feedback, and turn proven needs into production releases.
- Designed data models, validation rules, access controls, system boundaries, and support processes so consequential staff actions remained understandable, recoverable, and under human control.
- Used AI coding agents to prototype and test production changes, while personally reviewing code, failure paths, and release readiness.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Led a production migration across TypeScript, JavaScript, Python, Django REST APIs, PostgreSQL, Docker, and GCP so a live startup product could evolve without interrupting customer workflows.
- Integrated an AI writing assistant using LLM prompts, Django services, and live platform activity as context, then fixed prompt and context failures so creators received relevant drafts inside their publishing workflow.
- Hardened Pub/Sub and webhook workflows with idempotency, durable event records, retries, concurrency tests, and failure handling so duplicate events and partial outages did not corrupt user state.
- Managed GCP CI/CD, production logs, health checks, deployment gates, and automated rollback so failures were visible and releases could recover safely.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented customer workflow, using Next.js, React, TypeScript, Node.js, REST APIs, PostgreSQL, and role-based access to deliver one working product.
- Worked directly with advisors and employers through demos and a live pilot, using browser traces, logs, diagnostic SQL, and data validation to reproduce failures and convert feedback into product changes.
- Replaced disconnected spreadsheets with shared candidate records, service workflows, dashboards, reports, permissions, and validation so each user could act on dependable information.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with Next.js, TypeScript, React, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Modeled records, attendance, services, payments, receipts, permissions, and reporting so program teams could complete daily work from consistent data instead of manual reconciliation.
- Diagnosed production and data failures with logs, SQL, Python validation scripts, cleanup workflows, and user walkthroughs, then documented fixes so recurring problems were easier to resolve.

Selected AI Agent and Developer Tooling

RegistroCiberVE Research and Incident Verification Agent

Python, Playwright, LLM APIs

- Built an agent workflow that ingested incident files, generated searches, rendered web sources, extracted PDF evidence, and wrote structured records for a public bilingual cybersecurity registry.
- Added source scoring, conflicting-evidence checks, rejection reasons, uncertainty labels, caching, retries, fallbacks, model escalation, and human-review signals so unsupported claims stopped before publication.

Brio - Mobile Agent Control Plane

React Native, Go, PostgreSQL

- Built a control plane with device pairing, per-user ownership, session state, relay routing, action logs, and health checks so a persistent AI agent could be operated and monitored across devices.

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js

- Built a workspace for Codex, Claude Code, Cursor, and OpenCode with session control and runtime visibility so multi-provider coding workflows could be tested and improved from real failures.

Open Source and Volunteer Leadership

Open-Source Contributor: Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed prompt-preservation and board-scoped default fixes to Hermes Agent, plus Windows agent setup, stale SSH-session, and editor fixes through public issues, regression tests, and maintainer review.

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Led strategy, partnerships, operations, and onboarding for a national youth entrepreneurship network.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
