Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned the product roadmap and platform architecture for internal education systems, turning ambiguous stakeholder workflows into requirements, priorities, production releases, and continuous improvements so staff could move forward without perfectly defined specifications.
- Used Zrode, Claude Code, Codex, and Cursor to accelerate requirements analysis, prototyping, implementation, testing, and documentation, then reviewed AI-generated work for security, maintainability, and production readiness.
- Led hands-on delivery across frontend, backend, database, access control, deployment, and production support, reviewed GitHub pull requests, and communicated decisions, progress, risks, and tradeoffs so contributors and non-technical leaders shared clear ownership.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Led the modernization and production operation of a live customer platform across a React and SvelteKit frontend, Node.js web tooling, Python/Django REST APIs, PostgreSQL, and GCP so the product remained reliable while its architecture evolved.
- Built TypeScript, JavaScript, HTML, and CSS workflows and integrated REST APIs, Dyte live video, webhooks, and CMS tooling so customers could create, manage, discover, and publish content from one product.
- Stabilized asynchronous PostgreSQL workflows with verified webhooks, idempotency, retries, and failure-path tests so duplicate events and transient outages could not corrupt user operations.
- Managed Dockerized GCP deployments and CI/CD with Cloud Build, environment configuration, monitoring, health gates, and automated rollback so changes could move from staging to production with observable and recoverable failure handling.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer using TypeScript, JavaScript, React, Next.js, Node.js, and PostgreSQL so candidates, advisors, employers, and administrators could manage services and opportunities in one platform.
- Designed the relational schema, Prisma migrations, REST APIs, role-based access, dashboards, and reporting flows so candidates, advisors, employers, and administrators could share dependable operational data without disconnected spreadsheets.
- Gathered requirements directly from users, rapidly prototyped workflows, ran demos and a live pilot, and converted feedback into documented product decisions and production releases.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

Software Developer Intern at AVAA, Caracas

September 2021 to August 2022

- Built, deployed, and maintained SEP and SEA with TypeScript, JavaScript, React, Next.js, PostgreSQL, and Azure, replacing spreadsheet-based operations for approximately 300 scholars, advisors, and staff.
- Designed relational schemas, role-based access, dashboards, reporting, payment and service workflows, and Python validation pipelines so program teams could use reliable data across advising and education operations.
- Owned production support with browser debugging, logs, diagnostic SQL, user walkthroughs, and release documentation, turning recurring issues into clearer interfaces and maintainable operating processes.

Selected AI and Developer Tooling

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js, WebSockets

- Built and used an open-source React interface and Node.js WebSocket server for Codex, Claude Code, Cursor, and OpenCode so multiple coding agents could support one development workflow.
- Used Zrode daily for requirements analysis, prototyping, implementation, debugging, documentation, and code review while manually validating generated work for security, maintainability, and production readiness.
- Designed typed events, session orchestration, checkpoints, runtime logs, health checks, and automated tests so agent sessions remained observable, reproducible, and recoverable.

Open Source and Volunteer Leadership

Open-Source Contributor at Zed

July 2026 to Current

- Contributed Rust fixes for terminal focus, Git state, settings, language-server behavior, and Markdown navigation, using issue reports and maintainer review to improve the developer experience.

Education Committee Member at AVAA

September 2024 to Current

- Maintained the participant platform and translated recurring support and data-quality problems from non-technical program leaders into requirements, priorities, and system improvements.

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Set strategy with the board and led partnerships, operations, onboarding, and community programs for a national youth entrepreneurship and technology network.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
