Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned product direction, architecture, implementation priorities, deployment, and production support for education platforms, turning unclear operator needs into maintainable releases.
- Used coding agents to prototype, implement, refactor, and test production changes, while personally reviewing code, data access, failure paths, and release readiness.
- Led distributed contributors through written plans, GitHub code reviews, automated tests, and release checks so the team could move quickly without lowering its engineering standards.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Led the modernization of a live React product while developing TypeScript, Python, Django REST API, and PostgreSQL features for customer-facing workflows.
- Built full-stack publishing, search, CMS, live-video, and AI-writing features across browser interfaces, backend services, relational data, and production deployments so users could work inside one product.
- Hardened Pub/Sub and webhook workflows with idempotency, retries, concurrency tests, and failure handling so duplicate events and partial outages did not corrupt user state.
- Managed Dockerized services, GCP CI/CD, production logs, health checks, and automatic rollback so releases remained observable and recoverable.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented workflow, using React, TypeScript, Node.js, REST APIs, and PostgreSQL to ship the product end to end.
- Worked directly with advisors and employers through demos and a live pilot, turning user feedback into onboarding, service-management, data-validation, and reporting improvements.
- Used browser traces, application logs, diagnostic SQL, and regression checks to reproduce production failures, fix root causes, and explain technical tradeoffs to non-technical stakeholders.

Software Developer at AVAA, Caracas

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with TypeScript, React, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations for approximately 300 scholars, advisors, and staff.
- Designed relational schemas, migrations, permissions, validations, dashboards, and reports so program teams could complete daily work from consistent data instead of manual reconciliation.
- Diagnosed production and data failures with logs, SQL, Python scripts, cleanup workflows, and user walkthroughs, then documented fixes so recurring problems were easier to resolve.

Selected Agent and Developer Tooling

Zrode - Open-Source Agent Development Environment

TypeScript, React, Node.js, WebSockets

- Built and used an open-source development environment where multiple coding-agent providers could share one interface, persistent sessions, runtime state, and developer workflow.
- Designed typed events, session orchestration, checkpoints, runtime logs, health checks, and automated tests so agent runs remained observable, reproducible, and recoverable.

Brio - Mobile Agent Control Plane

Go, React Native, PostgreSQL

- Built Go companion and relay services with a shared protocol, device pairing, session control, action logs, and health checks so a persistent agent could be operated across devices.

Open Source and Volunteer Leadership

Open-Source Contributor: Hermes Agent, Orca, and Zed

July 2026 to Current

- Contributed prompt-preservation, board-scoped default, Windows agent-setup, stale SSH-session, and editor fixes through public issues, regression tests, GitHub code review, and maintainer feedback.

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Led strategy, partnerships, operations, and onboarding for a distributed national youth entrepreneurship network.

Education Committee Member at AVAA

September 2024 to Current

- Maintained the Participant Evaluation System and supported Programa Excelencia through workflow improvements, data validation, technical analysis, and documentation so the committee could make decisions from reliable information.

Code Mentor at Technovation Girls Venezuela

January 2026 to April 2026

- Mentored four students from research and product definition to a working mobile prototype in MIT App Inventor, teaching debugging, scope control, and clear technical decision-making.

Education

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027
