

Kevin Bravo

Forward-Deployed AI Engineer | Product Engineering and Client Delivery

0bravokevin@gmail.com | kevinbravo.com | github.com/0bkevin | linkedin.com/in/0bkevin

Professional Summary

Product engineer with 5 years of experience taking messy operational problems from discovery to production software. Work directly with stakeholders to map workflows, decide what should be automated, ship a first version, and stay with it through pilot feedback, deployment, and support. Built a multi-tenant platform as the sole engineer for a U.S. Department of State unit and build AI agent systems with Python, TypeScript, LLM APIs, browser automation, structured outputs, retrieval, retries, fallbacks, and production diagnostics.

Technical Skills

Client discovery and delivery: Workflow mapping, automation judgment, rapid prototyping, demos, pilot support, tradeoffs with non-technical stakeholders, API integrations, and production ownership.

Production AI systems: Python, OpenAI and Anthropic APIs, function calling, tool use, structured outputs, prompt engineering, retrieval and RAG-style verification, document processing, evaluation criteria, uncertainty handling, human-review checkpoints, Playwright, model escalation, cost and latency tradeoffs, and multi-provider workflows.

Production systems: TypeScript, JavaScript, Django, REST APIs, webhooks, authentication, OAuth2 concepts, PostgreSQL, Docker, GCP, AWS, Azure, DigitalOcean, CI/CD, logs, health checks, idempotency, retries, timeouts, fallbacks, and production debugging.

Work Experience

Proyecto Educa

Chief Technology Officer

*Remote
Dec 2025 - Present*

- Set product and technical direction for education platforms, taking unclear stakeholder needs through architecture, implementation priorities, working releases, and production support.
- Review contributor work and technical decisions, define release standards, unblock implementation, and remain responsible when production issues occur.

Free2Z

Principal Software Engineer

*Remote
Apr 2025 - Jun 2026*

- Led a live React-to-SvelteKit migration across Dockerized Django services, REST APIs, PostgreSQL, GKE, Cloud SQL, GCS, Pub/Sub, Cloud Build, and Workload Identity.
- Made asynchronous workflows safe under duplicate delivery and transient failure with durable idempotency, verified webhooks, processing leases, explicit ACK/NACK behavior, health gates, automatic rollback, retry-safe migrations, and failure-path tests.
- Integrated and shipped an AI writing assistant into Free2Z's live blogging workflow, helping users draft posts and choose topics from high-interest activity on the platform, turning current community interest into clearer ideas and publishable content.

U.S. Department of State (via AVAA)

Product Engineer | Bilingua Talent

*Remote
Nov 2024 - Oct 2025*

- Built Bilingua Talent as the sole engineer after mapping an undocumented client workflow; designed the PostgreSQL schema, four-role access model, REST APIs, dashboards, reporting, deployment, and support process.
- Ran demos and a pilot with 50 users and 5 companies, then revised onboarding, service management, data validation, and reporting based on what confused users or failed in practice.

Freelance

Software Engineer

*Remote
Sep 2024 - Dec 2024*

- Delivered client web products, automation scripts, and API-connected workflows, owning discovery, prioritization, implementation, deployment, iteration, and technical support.

Asociacion Venezolano Americana de Amistad (AVAA)

Software Developer

*Remote
Sep 2022 - Jul 2024*

Software Developer Intern

*Remote
Sep 2021 - Aug 2022*

- Built, deployed, and supported two internal platforms for approximately 300 scholars, advisors, and staff, replacing spreadsheet-heavy workflows with PostgreSQL-backed records, services, payments, attendance, and reporting.
- Worked directly with non-technical operators on issue reports, data cleanup, workflow changes, user support, and Python scripts for analytics and validation.

Selected AI Agent and Developer Tooling Work

Research and Incident Verification Agent

Python, Playwright, LLM APIs

Built a Python agent that reads incident files, searches and renders sources with Playwright, judges incident-specific evidence, and writes structured records and debug reports. Added candidate scoring, rejection reasons, uncertainty labels, caching, retries, timeouts, browser and social-source fallbacks, human-review signals, staged search, and model escalation to control latency and cost.

Zrode and Brio

AI Agents, Developer Tooling

Build and use an agentic development environment and control plane for multi-provider coding workflows, session control, relay routing, runtime logs, health checks, and operational visibility.

Open Source, Leadership, Education and Languages

Zed: Open-source contributor to the Zed code editor. **JA Venezuela Alumni:** Vice President. **Dev3pack:** Global Web3 and AI hackathon hub organizer.

Instituto de Estudios Superiores de Administracion (IESA): Master of Public Administration, in progress, 2025 - 2027.

Languages: Spanish (Native), English (C1 professional proficiency).
