Spanish (Native) | English (C1)

Education & Certificates

- M.P.A. from IESA (Instituto de Estudios Superiores de Administracion), in progress Expected 2027

Work History

Chief Technology Officer at Proyecto Educa, Remote

December 2025 to Current

- Owned product direction and production support for education platforms by reproducing issues from vague operator reports, separating data or configuration failures from product bugs, and turning root causes into documented workflows and release priorities so staff could keep programs running.
- Reviewed contributor code and technical decisions, wrote runbooks and release notes, and walked non-technical stakeholders through tradeoffs so teammates could resolve recurring issues without creating an engineering bottleneck.

Principal Software Engineer at Free2Z, Remote

April 2025 to April 2026

- Led a live React-to-SvelteKit migration across TypeScript, JavaScript, Python, Django REST APIs, PostgreSQL, Docker, and GCP so the startup could improve architecture and reliability without interrupting the product used by its community.
- Traced production failures across browser JavaScript, REST APIs, PostgreSQL, Pub/Sub, and verified webhooks using logs and integration tests, then added idempotency, retry handling, health checks, and rollback safeguards so duplicate events and transient outages would not corrupt user workflows.
- Integrated an AI writing assistant into the production blogging flow using LLM prompts, Django APIs, and live platform activity as context, then debugged prompt and context misfires so non-technical creators could turn community interests into relevant drafts and publishable posts.

Product Engineer at U.S. Department of State via AVAA, Remote

November 2024 to August 2025

- Built Bilingua Talent as the sole engineer after mapping an undocumented customer workflow, using Next.js, React, TypeScript, Node.js web tooling, REST APIs, PostgreSQL, and role-based access so advisors and employers could manage bilingual candidates, training services, and reports in one product.
- Worked directly with advisors and employers during demos and a live pilot, using browser traces, logs, diagnostic SQL, and data validation to reproduce onboarding and reporting issues, resolve them, and convert repeated questions into stronger validation rules and clearer workflows.

Work History (continued)

Software Developer at AVAA, Caracas

October 2022 to July 2024

- Built, deployed, and maintained SEP and SEA with Next.js, TypeScript, React, Node.js tooling, PostgreSQL, Prisma, Auth.js, and Azure, replacing spreadsheet-heavy operations with internal platforms serving approximately 300 scholars, advisors, and staff.
- Supported non-technical operators through issue reports, data cleanup, report reconciliation, and workflow changes, using diagnostic SQL, Python ETL and validation scripts, and written walkthroughs so the team could solve recurring cases with less manual engineering help.

Selected AI Agent & Developer Tooling Projects

Research and Incident Verification Agent

Python, Playwright, LLM APIs

- Built an agent workflow with prompt engineering, retrieval from source knowledge bases, structured outputs, and human-review signals to turn incident files into evidence records and debug reports instead of unsupported black-box answers.
- Tested prompt, retrieval, and model failures with scoring, rejection reasons, uncertainty labels, retries, fallbacks, and model escalation so weak evidence was stopped before reaching users.

Zrode and Brio

AI Coding Agents and Developer Tooling

- Built multi-provider coding workflows with Claude Code, OpenAI Codex, and Cursor, adding session control, runtime logs, and health checks so developers could monitor agent runs and recover stalled sessions.

Open Source & Volunteer Leadership

Open-Source Contributor at Zed

July 2026 to Current

- Contributed Rust pull requests across terminal focus, Git state, settings, LSP, and Markdown navigation, using Zed's public issue and review workflows to improve the developer experience.

Education Committee Member at AVAA

September 2024 to Current

Vice President at Junior Achievement Venezuela Alumni

March 2026 to Current

- Set strategy with the board and led partnerships, operations, onboarding, and community programs for a national youth entrepreneurship and technology network.

Technovation Girls Code Mentor and Dev3pack Hub Organizer

2026

- Mentored four students from research to a mobile prototype and guided Web3 and AI hackathon teams on debugging, product scope, technical decisions, submissions, and pitches.
